Algae Oil Species Statement

Algae products are Docosahexaenoic acid (DHA) and Eicosapentaenoic acid (EPA) oils derived from the microalgae Schizochytrium sp (AAN).

The algae species used to produce the algae oils are Schizochytrium limacinum, being a synonyme of Aurantiochytrium limacinum.

The products contain minimum 90%TG, having a characteristic odor and is liquid at room temperature.

Kind regards
